

I am Dr Esra Amoura, a dentist, researcher, and clinical lecturer in Oral Medicine at the University of Manchester. I hold a Master's degree in Diagnostic Oral Pathology from the University of Sheffield (2014) and a PhD in Oral and Maxillofacial Pathology from the University of Sheffield (2021), providing me with extensive expertise in both clinical practice and academic research.

In addition to my academic qualifications, I have earned professional certifications, including Membership of the Faculty of Dental Surgery (MFDS) from the Royal College of Surgeons of England and Fellowship in the Higher Education Academy. My research focuses on the molecular and cellular biology of head and neck cancer, with a particular emphasis on salivary gland cancers.

Currently, as a clinical lecturer, I am involved in training the next generation of dentists, supervising clinical practice, and advancing dental education through innovative teaching methods. Passionate about improving patient care and advancing dental science, I actively collaborate on research projects and mentor postgraduate students.
